Raingage Network Operations

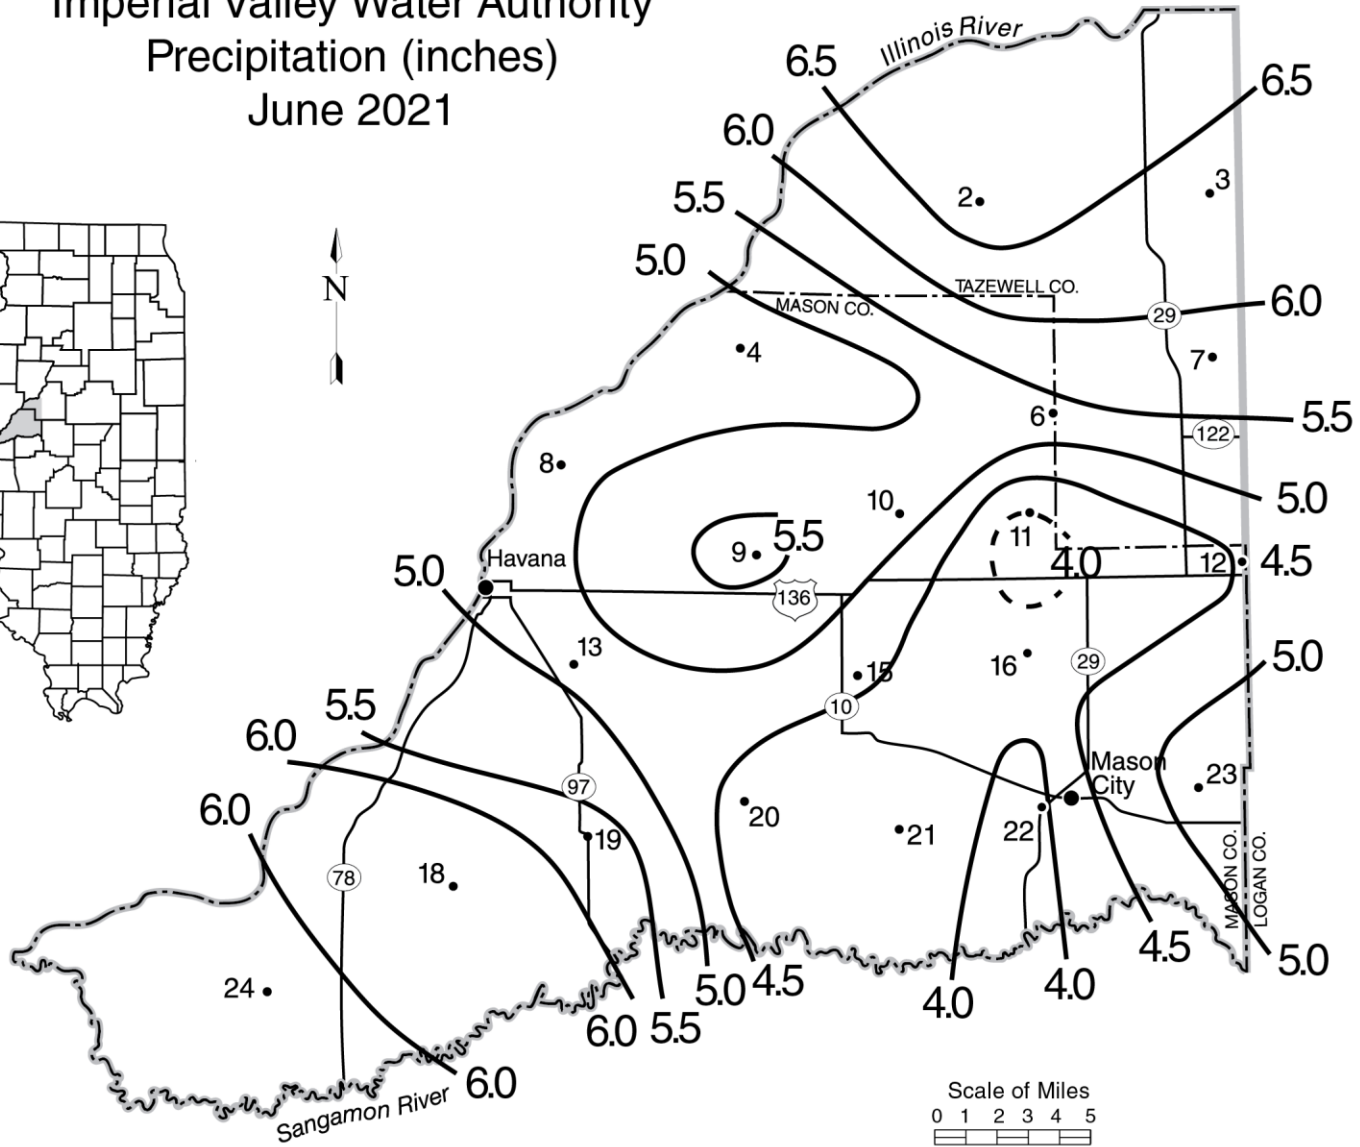

On July 2, Erin and Sebastian Moruszewicz downloaded the data, weighed the precipitation collections, and emptied, cleaned, and tared the buckets for all gages except gages #9 and #12. Gages # 8 and #13 were calibrated with correlation coefficients of 1.00000 and 0.99990, respectively.

Precipitation data for gages #9 and #12 are downloaded by modem every hour to an Illinois State Water Survey server.

Data Analysis

The average network precipitation for June 2021 was 5.06 inches, which is above the previous 28-year network average. Monthly gage totals varied 2.97 inches across the network, from 3.82 inches at site #11, west-northwest of San Jose, to 6.79 inches at site #2, north of Manito. The National Centers for Environmental Information (NCEI) issued the new 30-year (1991-2020) average precipitation amounts in June 2021. The 30-year (1991-2020) average precipitation amounts for the month of June at Havana and Mason City are 4.20 and 4.73 inches, respectively. The June 2021 network average of 5.06 inches is 121 percent of the 28-year (1993–2020) IVWA June network average of 4.18 inches. This was the eighth wettest June in the past 29 years.
